

Time

Minutes past and to the hour.

AM and PM

There are 24 hours in one day, but the day can be measured by splitting it into two halves. The first 12 hours of the day - from midnight to midday - are called AM, and the next twelve hours are called PM.

Analogue and Digital (24hour clock)

On the **analogue clock**, the time is represented by hands that spin around a dial and point to a location on the dial that represents the approximate time. On a **digital clock**, a numeric display indicates the exact time. Therefore, digital time will be written using 4 digits, separating hours and minutes with a colon. E.g ten past two in the morning is written as 02:10 and ten past two in the afternoon is written as 14:10
